

Message from the Poster Track Chairs

DSN 2024

On behalf of the Organizing Committee, it is our pleasure to welcome you to the Posters Track of the 54th IEEE/IFIP International Conference on Dependable Systems and Networks (DSN 2024) in Brisbane, Australia.

The poster track is a new track and as a continuation of the Fast Abstract track in the past. A DSN poster with an associated two-page extended abstract is lightly reviewed and will be included in the DSN supplemental volume and available through IEEEExplore. We welcome new ideas, work in progress, or opinions relevant to dependable systems and networks.

Contributions are particularly solicited from project teams, industrial practitioners, and academics who may not have been able to prepare and see full papers accepted for DSN but nevertheless seek an opportunity to engage with or get feedback from the DSN community.

Because they are brief and have two later deadlines, posters enable their authors to:

- Summarize work in progress
- Put forward novel or challenging ideas
- State positions on controversial issues
- Introduce new problems looking for a solution
- Suggest new approaches to the solution of open problems
- Discuss reliability and safety of emerging systems (e.g., autonomous vehicles, edge computing, quantum computing, brain-inspired computing, etc.)
- Present lessons learned from large system development or deployment

This year, we received ten submissions among the two submission periods. Each submission is reviewed by at least three program committee members. Based on the reviews, we accepted eight papers for presentation at the poster track. At the conference venue, we feature lightning talks, in which each author gives a short presentation of the work in two minutes before the poster session.

We would like to thank the program committee members for their constructive and timely reviews to shape the track program: Nuno Laranjeiro, Marcus Völz, Hui Xu, Leonardo Montecchi, Bo Fang, Razvan Beuran, Majed Valad Beigi, and Raffaele Della Corte.
