Message from the Doctoral Forum Chairs
DSN-S 2024

Welcome to the Doctoral Forum proceedings of DSN 2024, the 54th Annual IEEE/IFIP International Conference on Dependable Systems and Networks (DSN). The DSN Doctoral Forum provides an opportunity for students currently working in the area of dependable and secure computing to present and discuss their research objectives, approach, and preliminary results. It offers a place for students to present their ongoing research work, discuss emerging research ideas and their preliminary results, and get feedback that will hopefully help with their future research directions.

This year, we have selected 7 papers from all the submitted papers to the Doctoral Forum. Every submitted paper was reviewed by at least three program committee members. This year's contributions cover several timely and interesting topics that address novel dependability and cybersecurity challenges.

We hope that you will enjoy the Doctoral Forum program at DSN 2024.
